

What are we going to see in this session?

- Modules
- Codes

Modules

- Module is basically a folder containing set of terraform files.
- Modules also help us to organize the code in better manner.
- Modules also helps us to make the code reusable when required.
- Modules are one of the key concept used in many IT firms keep the code more organized.
- Let's see some examples here.
 - Step 1 : We will create a file to create EC2 instance
 - Step 2 : We will create a file to create EBS volume
 - Step 3 : We will create 2 different environment [Prod & Dev] and invoke these files as per requirement.

Modules :

Code : [git-repo](#) [file path : [Terraform/Codes/E16_modules](#)]

Project file :

Code : [git-repo](#) [file path : [Terraform/Codes/E17_Modules_dev](#)]

Code : [git-repo](#) [file path : [Terraform/Codes/E18_Modules_dev](#)]

End of this topic !

Any questions?

TERRAFORM
